

## Week 3 - Class 1

### Agenda:

- Quick Flexbox review
- Intro to CSS Transitions
- Nike Project

### CSS Transitions

CSS Transitions allow you to create simple animations on elements to make more interesting websites.

- Basic Documentation - [Read More](#)
- Button Examples - [Read More](#)
- CSS Tricks Documentation - [Read More](#)

### Nike Lab:

Today we are recreating Nike's homepage!

#### What you need to know:

- I've already setup the project basics for you. All of the assets you need are included (fonts, images, and icons)
- In the design folder, you will find the design for the page. You can also view <https://www.nike.com/>, however the images on the homepage have changed, but the styling has changed
- I've also added a reset and box-sizing reset to the project.

#### What we are doing:

- Mimic the Nike desktop layout - <https://www.nike.com/>
- Add links (examine the Nike website to get links)
- Use the same colors (examine the Nike website to get colors)
- Using images provided in project setup
- Use the Nike fonts I've included in the project

- Add hover effects with transitions (interact with the Nike homepage to see how it works)

**What we are NOT doing:**

- We are NOT creating carousels, those require some JavaScript knowledge. Please create a simple grid layout instead.
- We are NOT creating the dropdown menu, just create the static top menu without the hover effects that trigger the dropdown

**Homework**

- TBD
